

## CryptoRally Rules

1. You will receive a Decryption Sheet when you check in at the starting location. There is one Decryption Sheet for each team. Fill out the Decryption Sheet with the required information as you progress through the rally. You must present a completely correct Decryption Sheet at the finish line in order to be deemed to have finished the rally competition.
2. Unless you have a documented disability that impedes it, you must traverse the rally course on foot. You may use elevators in buildings, but no other mechanical conveyance is permitted.
3. When inside buildings, keep your conversations at low volume. Do not run while in the buildings.
4. Stay with your teammate. You must arrive together at checkpoints in order to receive clues.
5. You may use a (programmable) calculator to help with computations, but smartphones, laptops, and tablet computers are not permitted.
  - a. *Middle school students are not allowed calculators, they will be using a calculator sheet.*
6. The rally is branched -- don't be misled if you see another team following a different route.
7. If you decide to stop racing before you have completed the rally, return to the starting location and let us know that you are resigning from the race. (We are trying to keep track of everyone so that our checkpoint volunteers are not left to wait for a team that has stopped racing.) You are welcome to stay for the talk and other events, whether or not you finish the race.
8. Each checkpoint will close as soon as the last of its expected teams has departed. All remaining checkpoints except the finish line will close at 1:00. If you haven't finished the Rally by 1:00 return to WXL (PSA) 206 to learn the location of the finish line. Join us at the finish line for pizza, whether you complete the rally or not.
9. If both you and your teammate are under 18, your team must be accompanied by an adult guardian throughout the event. This accompanying adult may not help you decipher the clues.

*HAVE FUN!*
