MAT 211 EXAM 1 REVIEW

Section 4.1  Review: System of Linear Equations

1. Solve the following system using any means necessary (you may use your calculator). Express your answer as an ordered pair \((x, y)\). If there is no solution, enter NO SOLUTION. If the system is dependent, express your answer in terms of \(x\), where \(y = y(x)\). Make sure to show all your work.
   a. \[\begin{align*} 2x + 3y &= 1 \\ 5x + 4y &= 6 \end{align*}\]
   b. \[\begin{align*} 4x - 8y &= 20 \\ 2x - 4y &= 10 \end{align*}\]
   c. \[\begin{align*} -2x + 2y &= 4 \\ 3x - 3y &= -5 \end{align*}\]

2. You manage an ice cream factory that makes two flavors: Creamy Vanilla and Continental Mocha. Into each quart of Creamy Vanilla go 2 eggs and 3 cups of cream. Into each quart of Continental Mocha go 1 egg and 3 cups of cream. You have in stock 550 eggs and 1050 cups of cream. How many quarts of each flavor should you make in order to use up all the eggs and cream?

Section 6.1/6.2  Linear Programming

3. The area of a parking lot is 600 square meters. A car requires 6 square meters. A bus requires 30 square meters. The attendant can handle only 60 vehicles. If a car is charged $2.50 and a bus $7.50. How many of each should be accepted to maximize Profit?
   a. Set up for the solution of this Linear Programming (LP) problem.
   b. Using part (a), how many of each should be accepted to maximize Profit? What is the maximum profit?

4. Toys-A-Go makes toys at Plant A and Plant B. Plant A needs to make a minimum of 1000 toy dump trucks and fire engines. Plant B needs to make a minimum of 800 toy dump trucks and fire engines. Plant A can make 10 toy dump trucks and 5 toy fire engines per hour. Plant B can produce 5 toy dump trucks and 15 toy fire engines per hour. It costs $30 per hour to produce toy dump trucks and $35 per hour to operate produce toy fire engines. How many hours should be spent on each toy in order to minimize cost?
   a. Set up for the solution of this Linear Programming (LP) problem.
   b. Using part (a), how many hours should be spent on each toy in order to minimize cost? What is the minimum cost?

Section 15.1/15.2  Functions of Several Variables/ Partial Derivatives

5. Let \(f(x, y, z) = 1.5 + 2.3x - 1.4y - 2.5z\). Complete the following sentences.
   a. \(f\) \text{______________} \text{by} \text{______________} \text{units for every 1 unit increase in} \ x.
   b. \(f\) \text{______________} \text{by} \text{______________} \text{units for every 1 unit increase in} \ y.
   c. \text{______________} \text{by 2.5 units for every} \text{______________}. 
6. Brand Z's annual sales are affected by the sales of related products X and Y as follows: Each $1\text{ million increase in sales of brand X causes a }$2.5$\text{ million decline in sales of brand Z, whereas each }$1\text{ million increase in sales of brand Y results in an increase of }$23\text{ million in sales of brand Z. Currently, brands X and Y are each selling for }$2\text{ million per year and brand Z is selling }$62\text{ million per year. Model the sales of brand Z using a linear function. (Let }z = \text{ annual sales of Z (in millions of dollars)}, x = \text{ annual sales of X (in millions of dollars), and }y = \text{ annual sales of Y (in millions of dollars).})}$

7. Refer to the following plot of some level curves of $f(x, y) = c$ for $c = 1, 2, 3, 4$ and 5.

![Level Curves Plot]

Estimate
a) $f(1,-1) \approx \underline{\_\_\_\_\_\_\_\_\_}$.
b) $f(-1,2) \approx \underline{\_\_\_\_\_\_\_\_\_}$.
c) $f(-1.5,-0.5) \approx \underline{\_\_\_\_\_\_\_\_\_}$.

8. Given $f(x, y) = x^2 y + 3y + x^2 y^3 - 4x$, evaluate the following and simplify your result completely.
   a) $f(a, 4)$    b) $f_{xx}(x, y)$.
   c) $f_{xy}(x, y)$   d) $f_{yy}(x, y)$.
   e) $f_{yx}(x, y)$.

9. Given $f(x, y, z) = xe^{2y+3z}$.
   Find
   a. $f_x(1,-1,1)$   b. $f_y(1,-1,1)$   c. $f_z(1,-1,1)$

10. Your weekly cost (in dollars) to manufacture $x$ cars and $y$ trucks is

\[ C(x, y) = 240,000 + 6000x + 4000y - 20xy. \]
   a. Compute the marginal cost of manufacturing cars at a production level of 10 cars and 20 trucks.
   b. Compute the marginal cost of manufacturing trucks at a production level of 10 cars and 20 trucks.
Section 15.3  Maximum and Minimum Values

11. Consider the following provided graphs.

Classify each labeled point on each graph as one of the following:
Relative maximum, Relative minimum, Saddle point or neither a relative extrema or saddle point.

12. Given a function  \( f(x, y) = xy^2 - 6x^2 - 3y^2 \), determine the following
a) Find the critical point, \((x, y)\) of the function, \( f \).
b) Classify the critical point found in part (a) as Relative Minimum, Relative Maximum or Saddle point. (Hint: Use the Second Derivative Test.)

13. Given a function  \( f(x, y) = xy - 5y + x^2 + y^2 - 10x \), determine the following
a) Find the critical point, \((x, y)\) of the function, \( f \).
b) Classify the critical point found in part (a) as Relative Minimum, Relative Maximum or Saddle point. (Hint: Use the Second Derivative Test.)

Section 15.4  Constrained Optimization

14. Use substitution method to solve the following optimization problem.
Find the maximum value of \( f(x, y, z) = 1 - x^2 - y^2 - z^2 \) subject to \( z = 5y \).
Also find the corresponding point \((x, y, z)\).

15. Use Lagrange multipliers to solve the given optimization problem.
Find the maximum value of \( z = f(x, y) = xy \) subject to \( 3x + y = 60 \).
Express your answer as an ordered pair \((x, y, z)\).
16. Use Lagrange multipliers to solve the given optimization problem.

Find the minimum value of \( z = f(x, y) = x^2 + y^2 \) subject to \( x + 2y = 10 \).
Express your answer as an ordered pair \((x, y, z)\).

17. A consumer’s utility function is given by \( f(x, y) = (3x + 1)y \) where \( x \) is the quantity of good X that is bought and \( y \) is the quantity of good Y that is bought. The price of good X is $3 while the price of good Y is $4. If the consumer has $31 to spend on good X and Y, use Lagrange multipliers to find the consumer’s optimal utility level (i.e. calculate the consumer’s optimization problem of dividing her money between goods X and Y in the way that maximizes their utility).

18. You want to fence in a rectangular vegetable patch. The fencing for the east and west sides costs $4 per foot, and the fencing for the north and south sides costs only $2 per foot. I have a budget of $80 for the project. Use Lagrange multipliers to find the dimensions of the vegetable patch with the largest area I can enclose? What is the largest area?

**EVT Extreme Value Theorem**

19. Find the absolute maximum and absolute minimum of the function:

\[ z = f(x, y) = 4x + 6y - x^2 - y^2 \]
subject to the constraints: \[ \begin{cases} 0 \leq x \leq 4 \\ 0 \leq y \leq 5 \end{cases} \]

[HINT: Sketch the region with the constraints above and follow the steps below to complete the problem]

a) Find all the corner points of the region.
b) A critical point(s) that lie within the region.
c) All the boundary points when subjecting \( f(x, y) \) to the boundary constraints.
d) Find all corresponding \( z \)-values in the blanks provided and state the absolute maximum and minimum values of \( f \) and their corresponding \((x, y)\) points.

ABSOLUTE MIN: ________________
ABSOLUTE MAX: ________________

20. Repeat question 19 with the following function and constraints inequalities

\[ z = f(x, y) = (x - 10)^2 + (y - 20)^2 + 150 \]
subject to the constraints: \( 2x + y \leq 20, \ x \geq 0, \ y \geq 0 \).

21. Repeat question 19 with the following function and constraints inequalities

\[ z = f(x, y) = 4x + 10y + 20 \]
subject to the constraints: \( y \leq 36-x^2, \ y \geq 0 \).
Answers

1. a. Independent system with one unique solution, (2, -1).
   b. Dependent system with an infinite number of solutions, \((x, \frac{x-5}{2})\).
   c. No Solution

2. 200 quarts of Creamy Vanilla and 150 quarts of Continental Mocha

3. a. let \(c\) be the # of cars and \(b\) be the # of buses. Let \(P\) be the profit in dollars.

   Maximize \(P = 2.50c + 7.50b\)
   \[c + b \leq 60\]
   \[6c + 30b \leq 600\]
   \[c \geq 0, b \geq 0\]

   b. 50 cars and 10 buses; Profit= $200

4. a. let \(d\) be the # of hours on dump trucks and \(f\) be the # of hours on fire engine.
   Let \(C\) be the cost in dollars.

   Minimize \(C = 30d + 35f\)
   Plant A: \(10d + 5f \geq 1000\)
   Plant B: \(5d + 15f \geq 800\)
   \[d \geq 0, f \geq 0\]

   b. 88 hours on dump trucks and 24 hours on fire engine at a minimum cost of $3480.

5. a. \(f\) increases by 2.3 units for every 1 unit increase in \(x\).
   b. \(f\) decreases by 1.4 units for every 1 unit increase in \(y\).
   c. Decreases by 2.5 units for every 1 unit increase in \(z\).

6. \(z = -2.5x + 23y - 21\)

7. a. \(f(1,-1) \approx \) 
   b. \(f(-1,2) \approx \) 
   c. \(f(-1.5,-0.5) \approx \)

8. a. \(f(a, 4) = 68a^2 - 4a + 12\) 
   b. \(f_{xx}(x, y) = 2y + 2y^3\) 
   c. \(f_{xy}(x, y) = 2x + 6xy^2\) 
   d. \(f_{yy}(x, y) = 6x^2y\) 
   e. \(f_{yx}(x, y) = 2x + 6xy^2\) 
   [Note: \(f_{xy}(x, y) = f_{yx}(x, y)\)
9. a. \( f_x(1,-1,1) = e \)  
   b. \( f_x(1,-1,1) = 2e \)  
   c. \( f_x(1,-1,1) = 3e \)

10. a. $5600 per car  
   b. $3800 per truck

11. a. P: Relative maximum, Q: Saddle point, R: Relative maximum  
   b. P: Relative minimum, Q: Neither, R: Relative maximum.

12. a. Critical points are \((0,0), (3,6), (3,-6)\)  
   b. \((0,0)\): Relative maximum, \((3,6)\) and \((3,-6)\): Saddle point.

13. a. Critical point is \((5,0)\)  
   b. \((5,0)\): Relative minimum

14. Maximum value of \(f=1\) and occurs at \((0,0,0)\)

15. \((10,30,300)\)

16. \((2,4,20)\)

17. 5 units of good X, 4 units of good Y.

18. \((5,10,50)\)

19. (a) \((0,0), (4,0), (0,5), (4,5)\)  
   (b) \((2,3)\)  
   (c) \((0,3), (4,3), (2,0), (2,5)\)  
   (d) Absolute maximum value of \(f=13\) and occurs at \((2,3)\). Absolute minimum value of \(f=0\) and occurs at \((0,0)\) and \((4,0)\).

20. (a) \((0,0), (10,0), (0,20)\)  
   (b) No critical point(s) in the interior of the region  
   (c) All 3 corner points and \((2,16)\).  
   (d) Absolute maximum value of \(f=650\) and occurs at \((0,0)\). Absolute minimum value of \(f=230\) and occurs at \((2,16)\).

21. (a) \((-6,0), (6,0)\)  
   (b) No critical point(s) in the interior of the region  
   (c) All 2 corner points and \((1.2,34.56)\).  
   (d) Absolute maximum value of \(f=370.4\) and occurs at \((1.2, 34.56)\) and absolute minimum value of \(f=-4\) and occurs at \((-6,0)\).
